What Will I Learn?

- How to train members of your department to use the Regional Patient Tracking System
 - Use of the Regional Patient Tracking System
 - Understanding the Incident Summary Tab
 - Using Reports Feature
 - Hardware Overview

The Region 3 Patient Tracking System is a web based tool with mobile hardware designed to collect critical patient information during a medical emergency. By taking a subset of the data that all medical providers collect and capturing it in a single application, the health care system, including EMS, hospitals, public health and first responder partners, are able to rapidly understand how they are distributed across field sites and medical facilities. All of the information collected is consistent with

We ask that services register no more than two representatives at this time. If there is an interest in sending additional, please email david.koscuk@nbems.org to be placed on a waiting list
